The report shows that ships produce 13.5% of all greenhouse gas emissions from transport in the EU, behind emissions from road transport. The report highlights both the challenges and the opportunities facing the shipping sector, which are of relevance to fostering cooperation between national, regional and local authorities, and between stakeholders. The report also shows the need for the European Maritime Transport Environmental Report on 1 September 2021, EMSA, along with the European Transport Commissioner, Viscount Dacić, and the Director-General of DG MOVE at the European Commission, and Dr. Hans Bruyninckx, the Executive Director of EMSA, Maja Markovčić Kostelac, and the Director-General of DG MOVE at the European Commission.

High-level Conference marks the launch of the European Maritime Transport Environmental Report

The report introduces the concept of a maritime sustainable supply chain, which encompasses the entire range of the Agency’s activities, from tasks and daily operations. The next step for EMSA is external communication, in the form of an EMSA Environmental Management System (EMAS) audit, as part of its internal environmental drive. EMSA has completed an internal environmental audit under the EMAS standard, which has enabled the Agency to successfully reduce its electricity and water consumption by 10% and its energy needs from renewable sources and has banned single-use plastics from its premises. The Agency has also reduced its greenhouse gas emissions by 5% compared to the previous year. The next step for EMSA is external communication, in the form of an EMSA Environmental Management System (EMAS) audit, as part of its internal environmental drive.
