

SafeSeaNet Group meeting no. 21
Agenda item V
8 May 2014

SSN 21/5/2 (v.1.00)
Lisbon, 8 April 2014

STATUS AT NATIONAL LEVEL

SSN Data Quality Report

Submitted by EMSA

<i>Summary</i>	The document analyses SSN implementation at national and central level and the related data quality issues, including the interface with THETIS.
<i>Action to be taken</i>	As per Section 8
<i>Related documents (most recent ones)</i>	a. SSN 20 report and SSN 20/5/2 document on SSN data quality. b. HLSG 9 report and agenda item 3.1 SSN progress report.

1. INTRODUCTION

This document presents an analysis of the implementation of SafeSeaNet (SSN) at national and central level, the related data quality issues and an update on the interface with THETIS.

2. SUMMARY

Since the last SSN workshop, several improvements in the implementation of SSN and the associated data quality have taken place, including the following:

- SSN V1 Port and Hazmat requests were phased out in December 2013.
- The use of the phone/fax solution for Hazmat details is steadily decreasing.
- Portugal (Azores and Madeira) began sending AIS information through the MARES Regional Server in November 2013.
- The United Kingdom territory of Gibraltar entered into production in January 2014.
- Latvia, Lithuania and Poland completed, and Belgium and Denmark initiated, the commissioning tests to comply with the new XML messaging framework for Incident Reports.
- Mandatory Reporting System (MRS) messages are more widely reported. In particular, Spain began to provide ship MRS notifications for CANREP and WETREP, Denmark and Sweden for SOUNDREP and Iceland resumed transmitting data for TRANSREP.
- Some of the longstanding issues affecting individual MSs have been resolved or minimised, such as: the high number of "Waste" type Incident reports (France); the low number of ship calls reporting a Hazmat non-EU Departure (France), and; the

misalignment of the "Sent_At" which did not coincide with the actual time when notifications were sent (Spain).

However, other issues remain unresolved such as:

- the lack of Shipcall synchronisation for some German ports;
- the use of the dummy Persons on Board (POB) value (three MSs still quote this value in more than 20% of their Port Plus notifications);
- the abnormal number of "Updates" per "Shipcall" (some MSs update the same Shipcall more than 30 times);
- the lack of MRS notifications from Ireland (WETREP), Norway (BAREP), Portugal (WETREP) and the United Kingdom (CALDOVREP and WETREP), and;
- the AIS coverage problems in Greece.

In addition to the above issues, it was found that two Member States did not have the capability of ensuring that SSN messages are stored and then transmitted to the SSN Central system when communications and/or systems have recovered. The national and SSN Central systems should be able to re-send messages for up to 2 weeks (as required by the IFCD Section 4.4 Backup Procedures).

With respect to missing notifications and rejected messages, the overall situation is improving, but further effort from MSs is necessary in order to meet the agreed requirements (less than 0.1%, as indicated in Sections 4.3 and 4.5 of the Interface and Functionalities Control [IFCD] Document).

3. SSN IMPLEMENTATION

3.1. SSN Central system

SSN Central system was upgraded on 10 December 2013 in order to comply with SSN Reference Guide 2.07. The main changes related to:

- the phasing out of SSN Port and Hazmat version 1 notifications (SSN 16.4.6);
- the new XML messaging framework for Incident Reports (SSN 17.3.1);
- voyage correlation rules, and;
- the implementation of ATA/ATD business rules (SSN 18/5/2) and the subsidiary LOCODEs (SSN 18.3.6).

It is expected that the next SSN upgrade will be deployed in June 2014. The most relevant changes are the option not to quote the *CargoManifest* element when reporting Hazmat information, and the option not to quote the *ETA* in Ship AIS notifications (regardless the *NextPortOfCall*). This upgrade will also resolve the issue related to the Incident reports functionality (see the document SSN 21.4.5 SSN Roadmap).

In February 2014, the most recent LOCODEs update was published by UNECE (version 2013-2, released on 20 December 2013) and uploaded in SSN.

3.2. Port Plus notifications

The status of SSN implementation for each MS is shown in Annex I. These tables show the system implementation report summary (Table 1) and the number of notifications per type (Table 2).

Port Plus notifications are widely reported by all MSs. However, some still do not implement the Port Plus message in accordance with the agreed rules laid down in the XML Reference Guide for all ports.

It should also be noted that some MS need to correct their implementation and/or operational procedures at national level in the following areas:

- The number of Port Plus notifications reporting “Hazmat non-EU Departure” information is not realistic (i.e. for ships carrying dangerous or polluting goods that are inbound to their ports from non-EU countries - see Annex I, Table 2).
- Port Plus implementation is not yet harmonised for all ports. For example, Germany has acknowledged that, for many ports, Hazmat and ATA/ATD to PortOfCall information are not always provided in the same shipcall.
- The number of updates per shipcall is abnormal (in some cases the same shipcall is updated more than 30 times), in particular for Belgium, Cyprus, Finland, France, Germany, Malta, the Netherlands, Poland and Portugal (see Annex III, Table 9).
- Member States should always quote all previously provided elements when updating shipcall information (i.e. when updating a “New” Port Plus notification with subsequent “Updates”). The SSN XML Reference Guide 2.07 (pages 84-85) states that (within the business rules related to the “UpdateStatus” attribute) an update message should always include:
 - ✓ the elements including the attributes to be updated (these elements should be found among those included in the original message identified by the UpdateMSRefId);
 - ✓ additional optional elements (should there be operational reasons for their inclusion), and;
 - ✓ the elements previously provided in the former message that was being updated.

3.3. Ship AIS and Ship MRS notifications

Ship AIS notifications: Belgium, Denmark, Greece, the Netherlands, Norway, Portugal, Spain, Sweden and the United Kingdom (except the port of Gibraltar) provide AIS information via a data stream. The remaining MSs continue to use both the message-based and the streaming mechanisms to provide AIS information. Greece still has some gaps in its AIS coverage.

During 2013, Belgium stopped using the message-based interface for providing AIS information in June and Portugal began providing AIS information for the Azores and Madeira archipelagos in November.

Ship MRS notifications: The list of MRSs adopted by the IMO which should be reported to SSN is shown in Table 3. No MRS reports have been received for BAREP (Norway), CALDOVREP (UK) or WETREP (Ireland, Portugal and the United Kingdom).

Spain began sending MRS reports for WETREP in February 2013, and also Denmark and Sweden for SOUNDREP in September 2013. Iceland resumed the exchange of MRS reports for TRANSREP in August 2013.

3.4. Incident Reports (IR)

The exchange of information between MSs is not yet widely implemented (especially requests for further action, including visits to certain ships following an Incident Report). Table 4 shows a mixed picture.

The new XML messaging framework for IRs (version 2.07) that became available in December 2013 fulfils the operational requirements (i.e. identifying each type of IR, distributing via XML and not only using the web distribution tool, etc.).

Belgium and Denmark initiated the commissioning tests for the new XML messaging framework for Incident Reports. Latvia, Lithuania and Poland completed the tests and are already able to start using the functionality.

4. OPERATIONAL USE OF SSN

There are 1,430 authorities or persons registered in SSN. Of these, 776 are registered as web users in the SSN Central system and 467 have access to the SSN Graphical Interface (SSN GI). Other registered users at national level access information via the national systems.

According to EMSA statistics, the level of requests to SSN (machine to machine or via the web textual interface) remains low for most MSs (see Annex II – Table 5, detailing requests by MS and by type of notification). It should be noted that these statistics neither include requests for SSN information submitted by users of other systems (e.g. CleanSeaNet and THETIS), nor SSN information obtained via the simple display/visualisation of the SSN GI.

Denmark and Norway both ceased using automatic Shipcall requests for the full Hazmat details as requested at SSN HLSG 6. Finland stopped using automatic Port v1 requests in March 2014.

5. SYSTEM AVAILABILITY AND PERFORMANCE

EMSA continuously monitors the availability and performance of SSN, including: the connection status of SSN national systems; the exchange of notifications between these systems and the SSN Central system, and; the interfaces between SSN Central and other EU systems (i.e. CSN, LRIT, THETIS). The performance levels for 2013 were as follows:

- The maximum SSN Central system downtime occurred in the fourth quarter 2013, and lasted 5 hours and 46 minutes. The maximum permissible period of continuous interruption was not exceeded, and the availability of the SSN Central system (including the SSN GI) was 99.78%¹ between 1 January and 31 December 2013.
- The SSN-THETIS interface was down three times, with a total duration of four hours. No information was lost (just delayed).
- No relevant full downtimes were detected for the SSN national systems.
- Significant partial downtimes were observed for some SSN national systems. The accumulated downtimes were: Cyprus (6d21h47m), Finland (10d6h20m), Italy (1d5h30m), Malta (7d4h15m0), the Netherlands (2d16h11m), Spain (17h55m) and Sweden (19d21h19m). These affected the delivery of Port Plus information and the service delivered by the THETIS system as, during those periods, no information on ship calls was available to support Port State Control activities.

6. DATA QUALITY

The main data quality issues detected are listed below:

- a. Missing Port Plus notifications (Section 6.1 and Annex III – Table 6)
- b. Missing Hazmat information (Section 6.2 and Annex III – Table 7)
- c. Hazmat details using phone/fax solution (Section 6.3 and Annex III – Table 8)
- d. Number of updates per shipcall (Section 6.4 and Annex III – Table 9)
- e. Rejected notifications (Section 6.5 and Annex III – Table 10 and Table 11)

¹ According to the IFCD, Section 4.3, System Availability Requirements, “the availability of the SSN system shall be maintained at a minimum of 99% over a period of one year, with the maximum permissible period of interruption being 12 hours”.

The reporting period was January 2014, and for missing Port and Hazmat information and Hazmat details, it was the second half of 2013.

A summary of the findings is presented in Sections 6.1 - 6.5 below, and full details are available in Annex III. More detailed information on the situation relating to the following issues can be found in Annex IV

6.1. Missing Port Plus notifications (ship calls)

EMSA checked 4,114 ships that visited EU ports, and found that 78 of the due notifications had not been sent to SSN (i.e. 1.9% of ships calling at EU ports were not reported to SSN). Figure 1 shows the overall trend by comparing the percentage figures for the previous reporting periods:

Figure 1 – Missing Port notifications by reporting period

Annex III, Table 6, includes the detailed results per Member State.

6.2. Missing Hazmat information

EMSA analysed MRS reports and monitored ships carrying Hazmat cargoes by cross-checking the results with Hazmat information provided by MSs. To better assist MSs in the implementation of the Directive at national level, the MSS began monitoring ships that were inbound from ports located outside the Community, and en route to MS ports or anchorages located in MS territorial waters (Hazmat non-EU Departure). Lack of due Hazmat information, or Hazmat information provided after arrival in port, is reported as missing.

Within the exercise undertaken for this report, 11% of the due notifications (Hazmat EU and Hazmat non-EU Departure) had not been sent to SSN (i.e. 210 out of 1,865 notifications for ships carrying Hazmat cargoes were not sent to SSN).

When comparing the percentage figures for vessels having departed from MS ports and carrying Hazmat cargoes (Hazmat EU Departure), the situation improved from 10% to 8% (see Figure 2 – blue data). With respect to Hazmat non-EU Departure, the missing information reached 27%.

Figure 2 shows the overall trend, by comparing the percentage figures for the previous reporting periods.

Figure 2 – Missing Hazmat information by reporting period (Hazmat EU Departure – Blue; and Hazmat non-EU Departure – Green)

Annex III, Table 7, includes the detailed results by Member State.

6.3. Hazmat details using phone/fax solution

At the 6th HLSG meeting (13 December 2011), it was agreed that MSs would endeavour to phase out the phone/fax solution for the provision of Hazmat details, and that this would continue to be available for Hazmat messages in emergency situations only. Although the figures remain high (8.5% of Hazmat details were sent using the phone/fax solution between December 2013 and January 2014), the evolution is positive (see Figure 3).

Member States are reminded that only the XML solution will be accepted for the provision of Hazmat details (as reflected in the XML Reference Guide v3).

Figure 3 – Hazmat details by type and by reporting period

Annex III, Table 8, details the different solutions employed in each MS.

6.4. Number of updates per shipcall

In order to verify whether there were any issues relating to Port Plus implementation and/or operational procedures at national level, the MSS analysed the number of updates for individual shipcalls.

With respect to the provision of ATA and ATD, after initial notifications reporting the ETA, the minimum number of updates per shipcall was found to be two. When looking at updates relating to ETA, ETD and the provision of Hazmat EU/non-EU Departure information, a maximum of 10 updates per shipcall was seen to be acceptable.

Within the exercise undertaken for this report, the average number of updates for each shipcall was 3.2, and 6% of Shipcalls were updated more than 10 times. Furthermore, 9 MSs (Belgium, Cyprus, Finland, France, Germany, Malta, the Netherlands, Poland and Portugal) updated 10% or more of their shipcalls more than 10 times each.

Annex III, Table 9, includes the detailed results by Member State.

6.5. Rejected notifications

The Business Rules (BR) defined in the XML Reference Guide (v.2.07) address the rejection of certain notifications implemented in SSN, and aim at keeping the system within acceptable levels of quality and consistency.

The latest version of SSN rejects Port Plus notifications having ATD but no ATA². This is both to ensure data consistency (a ship cannot depart if it did not arrive), and to allow the SSN Central system to verify whether the ATD is after the ATA. SSN also implemented the THETIS business rule, whereby *ATAPortofCall* data cannot be submitted more than one year after the time that the original notification was received by the SSN Central system (XML Reference Guide v.2.07 page 86). In January 2014, these rules caused 22% and 9% of rejections respectively.

When comparing with the previous reporting period, the overall percentage of rejected Port Plus notifications deteriorated from 0.66% to 0.72%. This was mainly due to the implementation of the *ATA/ATD* business rule (as introduced in the paragraph above), the repetition of *ShipcallId* previously sent (15% of rejections) and the use of technically incorrect LOCODEs (14% of rejections). The results can be seen in Annex III (Tables 10 and 11). It should be noted that missing messages affect the proper implementation of both the VTMIS and PSC Directives.

According to the IFCD, invalid messages (i.e. those not compliant with the standards set in the SSN technical and operational documentation) should account for less than 0.1% of the total number of messages sent. Belgium, Germany, Greece, Iceland and Norway complied with this requirement in January 2014.

7. INTERFACE WITH THETIS

At SSN WS 17 and HLSG 7, EMSA was tasked with:

- a. ensuring that any new business rules created for THETIS were notified to the SSN group. Also, whenever there is no conflict between the underlying Directives, the business rules in THETIS and SSN shall be aligned. No new business rules were implemented during the reporting period (see Section 6.5 above).
- b. continuing to report at SSN workshops on:
 - mismatched LOCODEs;

² Member States should always quote all previously provided elements when updating ship call information (i.e. when updating a "New" PortPlus notification with subsequent "Updates").

- ATAs and ATDs not provided via Port Plus notifications, and;
- the timeliness of ATAs and ATDs.

The following sections deal with these 3 issues.

7.1. Mismatched LOCODEs

EMSA compared the LOCODEs used in the "PortOfCall" attribute in Port Plus notifications (1 July 2013 - 1 January 2014) with THETIS LOCODEs (dated 3 March 2014). The outcome is that 31 of the LOCODEs (see Annex IV, Table 12) reported in this period are still not recognised by THETIS (13 are UNECE, while 18 are SSN Specific). At SSN WS 20, 40 LOCODEs were reported as being mismatched.

The number of distinct ship calls not created via SSN Port Plus notifications was 143 (186 reported at SSN WS 20). The initial conclusions are as follows:

- A significant number of LOCODEs from two MSs are still being rejected by THETIS. Sweden had 14 LOCODEs rejected, which resulted in 79 missing calls, and during the same period, United Kingdom had 5 LOCODEs rejected, which resulted in 13 missing calls.
- 15 MSs have their SSN and THETIS LOCODEs aligned. These are Belgium, Bulgaria, Cyprus, Estonia, France, Germany, Greece, Iceland, Lithuania, Latvia, the Netherlands, Poland, Portugal, Romania and Slovenia.
- SSN Specific LOCODEs are either not properly managed by the SSN community, or not supported by the relevant PSC Authority. MSs should ask UNECE to create the relevant LOCODEs (with Port function), and to notify the PSC Coordinator at MS level that this has been done.

Pursuant to the discussion during SSN WS 17, EMSA contacted the PSC authorities in the MSs, recalling the need to align the location identification between THETIS and SSN. This has already resulted in a number of adjustments, together with a list of confirmed differences. These differences mainly relate to locations that are not relevant to PSC, such as anchorages outside territorial waters and ports not receiving commercial ships. However, the alignment task is still ongoing.

Following the adoption of the "LOCODE management" procedure at SSN WS 18, EMSA took the initiative of sharing the same procedure with the PSC community. This ensures that future changes in the list of codes used in SSN will be relayed by EMSA for acknowledgement by the respective PSC entities shortly afterwards.

The following table provides the evolution of the mismatched LOCODEs, comparing SSN WS 21 with previous reporting periods.

Member State	Previous and Current Reporting Periods - LOCODEs rejected by THETIS										
	SSN17		SSN18		SSN19		SSN20		SSN21		
	UNECE	SSN Specific	UNECE	SSN Specific	UNECE	SSN Specific	UNECE	SSN Specific	UNECE	SSN Specific

Figure 4 – Evolution of the mismatched LOCODEs

EMSA will continue to report on this issue at SSN workshops and relevant Paris MoU meetings, and in MS individual status reports on a monthly basis.

7.2. ATA and ATD not provided via Port Plus notifications

Within the context of the New Inspection Regime for Port State Control (established by Directive 2009/16/EC and supplemented by the RoRo Ferry Inspection Regime - Directive 1999/35/EC), MSs are required to provide the actual times of arrival (ATA) and departure (ATD) for ships calling at their ports and anchorages to the THETIS inspection database via SSN within a reasonable time (Art. 24.2).

ATA is a key element of THETIS, and ship calls missing this attribute are discarded (i.e. updates or new calls including ATD without ATA). MSs are reminded that, for statistical and operational purposes, THETIS only recognises a ship call when the ATA has been provided. This section evaluates the availability of ATA/ATD information in SSN for vessels falling within the scope of Directives 2009/16/EC and 1999/35/EC.

38,666 of the ship calls created in SSN during January 2014 (via Port Plus) fell within the scope of these Directives (see Annex IV, Table 13 and Figure 5).

Following the methodology introduced at SSN WS 17, the findings showed that, on average, 8.9% of ship call notifications lack both the ATA and the ATD. In addition, a further 4.2% lack only the ATD. The overall situation has improved since the last reporting period (July 2013).

Norway, Germany³ and Sweden provide the largest number of notifications lacking ATA and ATD information (Annex IV – Figure 6). EMSA will continue to report on this issue at SSN workshops and relevant Paris MoU meetings, and in MS's individual status reports on a monthly basis.

7.3. Timeliness of ATA and ATD reported in SSN

Article 24 of Directive 2009/16/EC on Port State Control requires that ATA and ATD information for all ships calling at MS ports or anchorages "is transferred within a

³ This is due to the lack of Ship Call ID harmonisation for some German ports.

reasonable time to the inspection database through the Community maritime information exchange system SafeSeaNet, together with an identifier of the port concerned.”

Following the detection of abnormal differences between time of arrival information and the time of its provision (which created operational and statistical issues), THETIS implemented a new rule in June 2012 (as announced at the relevant Paris MoU meeting and SSN WS 17) in order to reject ATAs or ATDs which are provided more than 3 hours in advance of the system date and time.

EMSA has compared the timeliness of ATA and ATD information with the date/time sent (the “SentAt” element in the notification), and Annex IV (Table 14) reports the results by MS. The “ATD without ATA” and “no ATA or ATD” problems are often caused because of the non-repetition of all previously sent information in Port Plus updates (as laid down in the XML Reference Guide).

8. PROPOSED ACTIONS

8.1. SSN implementation (Section 3) and operational use of SSN (Section 4):

- MSs to ensure that Port Plus messages are implemented in accordance with the agreed rules laid down in the XML Reference Guide (**action 1**).
- MSs to ensure that Ship MRS notifications are submitted in compliance with the reporting obligations of Directive 2002/59/EC, as amended (**action 2**).
- MSs to ensure that Incident Reports are submitted in compliance with the reporting obligations of Directive 2002/59/EC, and with the agreed SSN Incident Report Guidelines (**action 3**).

8.2. Data quality (Section 6):

- In relation to Sections 6.1 and 6.2, MSs to take the necessary measures to ensure that masters, agents and operators are fully aware of their Port and Hazmat reporting obligations (**action 4**).
- MSs should consider imposing sanctions whenever information is not provided in accordance with Directive 2002/59/EC (as amended), as foreseen for example in Art. 25b. That is, whenever ship masters, agents or operators do not provide Port or Hazmat notifications and send associated Incident Reports to SSN (**action 5**).
- With respect to Section 6.3, MSs to accelerate the phasing out of the phone/fax solution for the provision of details in Hazmat information (**action 6**).
- In relation to section 6.4, MSs to analyse the causes for the abnormal number of Shipcall updates, and to correct system implementation and/or operational procedures at national level (**action 7**).
- With respect to Section 6.5, MSs to analyse (and resolve when necessary) the causes of the rejection of Port Plus notifications, either by using the regular information provided by the MSS, or the SSN receipt messages describing the causes of rejections (invalid format receipts). MSs are invited to ensure that errors in notifications are minimised. Should they occur, the corrected information should be sent to SSN without delay (**action 8**).

8.3. LOCODEs (Section 7.1):

- SSN NCAs and PSC authorities to ensure that all relevant LOCODEs used by SSN (identifying an actual port) are recognised by THETIS (**action 9**).
- EMSA to continue reporting on this issue at SSN workshops and relevant Paris MoU meetings, and in MS individual status reports on a monthly basis.

8.4. ATAs and ATDs not provided via Port Plus notifications (Section 7.2):

- MSs to provide ATA and ATD information via SSN (**action 10**).
- EMSA to continue to report on the ATA/ATD issue at SSN workshops and relevant Paris MoU meetings, and in MS's individual status reports on a monthly basis. Where necessary, MSs will be contacted individually.

8.5. Timeliness of ATAs and ATDs (Section 7.3):

- MSs to provide ATAs and ATDs "within a reasonable time," avoiding their provision prior to arrival or departure (not more than 3h in advance - **action 11**).
- EMSA to continue to report on this issue at SSN workshops and relevant Paris MoU meetings, and in MS individual status reports.

Table 10 – Port Plus notifications rejections and evolution

Highlighting those values higher than 1% of rejected notifications in red and those values complying with the IFCD in green

Rule	Status message describing the reason for rejection (if more than one reason is quoted, all of them apply for the specific notification)	Rejections	Expected actions
Group 1: the "Time" logic is not respected (relations between ETAs and ETDs, etc.)			
R01	A Port Plus notification must have ETAToNextPort subsequent to the ETDFromPortOfCall. ETAToNextPort greater than ETDFromPortOfCall.	122	To be corrected by MSs
R02	A Port Plus notification must have ETAToNextPort subsequent to the ATDFromPortOfCall: ETAToNextPort greater than ATDPortOfCall	23	To be corrected by MSs
R03	A Port Plus notification must have ETAToPortOfCall prior to the ETDFromPortOfCall: ETAToPortOfCall less than ETDFromPortOfCall.	69	To be corrected by MSs
R04	A Port Plus notification must have ATAToPortOfCall prior to the actual departure time from port of call: ATAPortOfCall less than ATDPortOfCall.	38	To be corrected by MSs
R05	A Port Plus notification having ATAToPortOfCall 1 year prior to the time received could not be accepted.	182	To be corrected by MSs
Group 2: missing "mandatory" information			
R06	A Port Plus notification including the PreArrivalNotification24HoursDetails element or the HazmatNotificationInfoEUDepartures element must have ETDFromPortOfCall	6	To be corrected by MSs
R07	A Port Plus notification with hazmat EUDeparture must have a NextPort.	9	To be corrected by MSs
R08	A Port Plus notification with hazmat EUDeparture must have ETAToNextPort.	2	To be corrected by MSs
R09	ETAToNextPort is Mandatory for notification messages including the NextPort information.	-	To be corrected by MSs
R10	The CargoManifest is mandatory when HazmatOnBoardYorN = Y	-	To be corrected by MSs
R11	A Port Plus notification with PortOfCall not equal to 'ZZCAN' must have EtaToPortOfCall (it is not optional).	172	To be corrected by MSs
R12	A Port Plus notification having PortOfCall = 'ZZCAN' can only be accepted if no ATAToPortOfCall/ ATDFromPortOfCall has been provided up to now.	18	To be corrected by MSs
R13	The notification must have quoted at least one of IMO or MMSI numbers	5	To be corrected by MSs
R14	A Port Plus notification including the PreArrival3DaysNotificationDetails element must have at least one of its attributes.	-	To be corrected by MSs
R15	A Port Plus notification including the HazmatNotificationInfoNonEUDepartures must have quoted the POBVoyageTowardsPortOfCall.	5	To be corrected by MSs
R16	[SENDER]: A port plus notification with the specified shipCallId [SHIPCALLID] has already been registered in SSN by [SENDER]	289	To be corrected by MSs
R17	ATAToPortOfCall should be provided when ATDFromPortOfCall is reported.	430	To be corrected by MSs

Table 11 – Number of rejections by cause and expected actions from EMSA and MSs
Reporting period: January 2014

Rule	Status message describing the reason for rejection (if more than one reason is quoted, all of them apply for the specific notification)	Rejections	Expected actions
Group 3: invalid values or references (IMO, MMSIs, LOCODES, ShipCallIds, etc.)			
R18	Invalid message. A port plus notification with the specified shipCallId [] has already been registered with different Vessel	-	To be corrected by MSs
R19	The message identified by MSRefId [MSREFID] has already been registered in SSN (Sent by [SENDER])	65	To be corrected by MSs
R20	LastPort Locode [LOCODE] is not technically correct. PortOfCall Locode [LOCODE] is not technically correct. NextPort Locode [LOCODE] is not technically correct.	269	To be corrected by MSs
R21	PortOfCall Locode [LOCODE] is not permitted. Verify your access rights as Portplus Notifier.	28	To be corrected by MSs
R22	The IMO number [IMONumber] is not valid	49	To be corrected by MSs
R23	Call Sign must be 7 characters maximum	-	To be corrected by MSs
R24	The NextPort must be different from PORTOFCALL.	-	To be corrected by MSs
R25	The Port Plus notification having PortOfCall = 'ZZCAN' and shipCallId [SHIPCALLID] is invalid because no voyage was found with the specified shipCallId.	98	To be corrected by MSs
R26	A PortPlus message update should be sent within maximum 120 days following the registration of the new ShipCall or the registration of the previous update for the same ShipCall	-	To be corrected by MSs
R27	The fax number is invalid	-	To be corrected by MSs
R28	The phone number is invalid	-	To be corrected by MSs
R29	The total number of persons aboard is not valid	-	To be corrected by MSs
R30	A Port Plus notification having PortOfCall equal to 'ZZCAN' must have UpdateStatus='U'.	12	To be corrected by MSs
R31	A Port Plus notification having UpdateStatus='U' must have UpdateMSRefId quoted.	30	To be corrected by MSs
R32	MID [MID] does not identify any Flag according to the ITU list of MIDs.	-	To be corrected by MSs
R33	A url must be defined for a URI source	-	To be corrected by MSs
R34	POBVoyageTowardPortOfCall has an invalid value	-	To be corrected by MSs
R35	Invalid message. A port plus notification with the specified shipCallId [SHIPCALLID] has already been registered with different Vessel [VESSEL1] - [VESSEL2].	-	To be corrected by MSs
R36	The voyage with the specified shipCallId [SHIPCALLID] is updated with different PortOfCall [LOCODE1] - [LOCODE2].	-	To be corrected by MSs

Table 13 – Availability of ATA and ATD information in SSN for vessels falling within the scope of Directives 2009/16/EC and 1999/35/EC ^{7 / 8}

Reporting period: January 2014

⁷ For most ports, Germany provides Hazmat information in a separate Shipcall from that reporting ETA/ETD to PortOfCall, therefore duplicating ship calls, but only providing one containing the ATA/ATD attributes.

⁸ ATA is a key element of THETIS and ship calls missing this attribute are discarded (i.e. updates or new calls including ATD without ATA).

Figure 5 – Availability of ATA and ATD information in SSN for vessels falling within the scope of Directives 2009/16/EC and 1999/35/EC (corresponding to Table 13)

Reporting period: January 2014

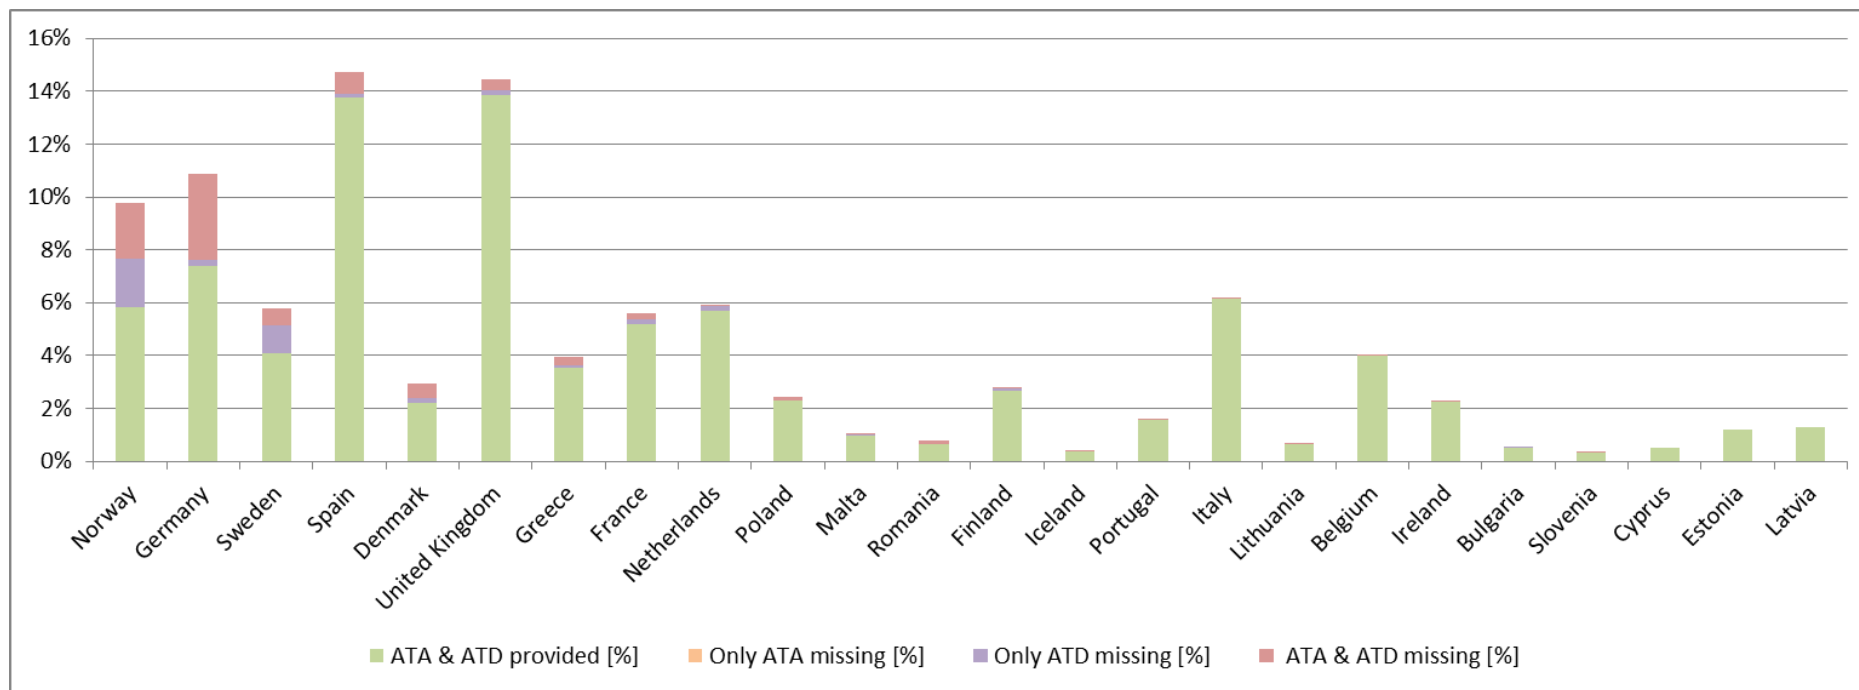

Figure 6 – Availability of ATA and ATD information in SSN for vessels falling within the scope of Directives 2009/16/EC and 1999/35/EC (corresponding to Table 13) – figures represent the percentage of overall EU ship calls

Reporting period: January 2014
