INTEGRATED MARITIME SERVICES

Over 150 different authorities across 26 EU and EFTA member states, five EU bodies and the European Commission currently use EMSA's Integrated Maritime Services (IMS) to access a tailored maritime traffic picture. This is made possible through a collaborative process involving information sharing and exchange, combined with advanced maritime data analysis. Through EMSA's existing maritime applications and other external sources, users' specific needs are fulfilled.

Since EMSA's IMS for member states became operational, the Agency has been developing and refining the individual services based on user feedback, ensuring that each is focused on the key objectives set. Regular information sessions and user consultations are held to share best practices, gather requirements and promote awareness of the maritime domain in Europe and beyond.

TRAINING VIDEOS

Videos on how to use the SEG and IMS app are available from the EMSA website and the EMSA YouTube channel.
http://emsa.europa.eu/

HOW TO GAIN ACCESS

Only registered IMS users from member state authorities and EU agencies have access to the IMS app.
Data distribution polices and access rights are managed by data owners (member states) and EU agencies.
Requests for access should be made via the National IMS Point of Contact by email to: ims@emsa.europa.eu

Available for mobile devices running Android or IOS:

THE IMS MOBILE APP

EMSA's Integrated Maritime Services (IMS) combine data from EU member states, EMSA and other EU agencies, to provide a comprehensive real time maritime picture. The IMS app is a 'light' (simplified) version of the SafeSeaNet Ecosystem Graphical User Interface (SEG) for mobile devices.

Many features are available on the welcome screen of the app on both mobile phones and tablet devices. Through the icons, the user can access the following functions:

Main menu	Search	Layer management
Timeslider	VDS Layer	Vessels near me
Center map	Play	Internet access

ADVANTAGES OF THE IMS APP

The app is simple and easy to use. A set of information and functionalities are available, including:

- Live vessel traffic picture
- Various display and filtering options
- Save vessels of interest (Favourites)
- View CleanSeaNet oil spills
- Vessel Detection Service (VDS)
- Various Background maps , e.g. nautical charts
- Offline capabilities (cached data).
